Urban Garden: Field Guide

Fictional course material for Brightspace Context.

The garden experiment compares two watering schedules.
Plot A receives 2 liters every morning; Plot B receives 2 liters every other day.
Each plot contains six basil plants and uses the same soil mix.
Measure soil moisture at 09:00 each Tuesday for four weeks.
The success threshold is an average soil moisture of at least 35 percent.

Reading check: Plot A receives 14 liters per week.
The field observation code is CEDAR-42.

These are invented teaching examples, not gardening recommendations.
